APPLIED LEVERAGE

Implementation *Sprint*

Four weeks. One leverage stack.
Built inside your actual business.

$3,500 FLAT | 4 WEEKS | DONE-WITH-YOU

For agency owners and consultants who are done running everything through their own hands.

THE PROBLEM

You built something real. And it's *crushing* you.

You have clients, revenue, a reputation. You know how to do the work and you know how to close.

And you are exhausted.

Not because you're lazy. You're exhausted because your business is built around **you** — your memory, your attention, your judgment, your hands. Every new client goes through your head first. Every deliverable touches your inbox. Every follow-up requires you to remember it exists.

You are not running a business. You are being the business.

SYMPTOM

The proposals you never followed up on. The client who went quiet. The onboarding that's different every time because it lives in your head.

ROOT CAUSE

Every single process depends on you to move it forward. The bottleneck isn't the market. **It's architectural.**

> This isn't a personal failure. It's an architectural one. And it's fixable — but not by working harder.

THE HIDDEN COST

What founder dependency *actually* costs.

Most of it never shows up on a P&L. But it compounds every single day.

→ Dropped Leads

That warm prospect from three weeks ago? You meant to follow up. You forgot. They hired someone else. That's not a sales problem — it's a systems problem.

→ Stalled Upsells

You do great work. Clients love you. But you never have bandwidth to proactively pitch the next engagement. Revenue is always reactive.

→ Ops Debt That Compounds

Every manual step you do instead of automating is a step you'll do again tomorrow. The cost isn't ten minutes. It's ten minutes times every working day of your career.

→ Capacity Ceiling

You can't take more clients because you're maxed. Not because demand isn't there. Because the operating system can't absorb it. That ceiling is artificial — and it costs you money every month.

> You don't need more hustle. You need a machine.

THE SOLUTION

We install *leverage* in four layers.

Applied Leverage is not coaching. It's not a course. It's a done-with-you implementation sprint that builds real operating infrastructure inside your actual business.

---

01 TARGET + SHOT

Sharpen what you sell and who you sell it to.

Most operators have a vague offer aimed at everyone. We narrow the target, tighten the positioning, and give you one clear shot that's easy to explain, easy to price, and easy to close.

02 DAILY REPS

Build the rhythm that moves pipeline every day.

No more feast-or-famine. We install a repeatable daily execution system — outreach, follow-up, content, delivery check-ins — so the business moves forward whether you feel motivated or not.

03 FIRST MACHINE

Automate the most painful manual path.

We identify the process that eats the most founder time and build the first real automation around it. Not a toy demo. A working machine that saves hours every week.

04 AI COUNCIL

Deploy AI agents with real jobs and boundaries.

Not ChatGPT prompts. An actual council of AI agents with defined roles: research, drafting, auditing, and decision support. Each one has a job, a scope, and a handoff protocol.

THE 4-WEEK BUILD

What happens *each week.*

Every week ends in something usable, not theoretical. You don't wait until week four to see results.

WEEK 1

Target + Shot

Audit the current offer, narrow the ICP, tighten the positioning, and define the one clear engagement you're selling. Deliverable: refined offer doc + positioning one-liner.

YOU WALK AWAY WITH

- Clear target market definition
- Sharpened offer and pricing
- Positioning one-liner that closes

WEEK 2

Reps

Design and install the daily execution rhythm. Outreach cadence, follow-up sequences, content production reps, and delivery check-ins. Built around your actual calendar.

YOU WALK AWAY WITH

- Daily operating cadence
- Outreach + follow-up system
- Content production rhythm

WEEK 3

Machine

Identify the most painful manual workflow and build the first automation. Could be onboarding, invoicing, reporting, or lead routing. Whatever hurts most, we fix first.

YOU WALK AWAY WITH

- One major workflow automated
- Hours of weekly time reclaimed
- Template for automating the next one

WEEK 4

Council

Deploy AI agents with specific roles: research, content drafting, quality auditing, and decision support. Each agent has a defined job, scope, and handoff protocol.

YOU WALK AWAY WITH

- AI council with defined roles
- Agent handoff protocols
- Less founder dependency on thinking work

FIT

This is built for *operators.*

Not beginners. Not tourists. Not tool collectors. This is for people who already have a working business and need it to work without them holding every piece.

This is for you if:

- You run an agency or consultancy doing real revenue
- Clients keep coming but the work keeps getting heavier
- You know you need systems but haven't installed them
- You want execution capacity without hiring a full team first
- You're ready to spend four focused weeks building the machine
- You value implementation over theory and advice

This is not for you if:

- You have no offer and no customers yet
- You're looking for a passive done-for-me fantasy
- You confuse buying AI tools with operational change
- You need basic sales before you need systems
- You want to be told what to think instead of how to build
- You're not willing to do the work during the sprint

4
weeks
of focused implementation

4
leverage layers
installed in your business

1
price
$3,500 flat. No upsells mid-sprint.

DIFFERENTIATION

Why this isn't just *another* offer.

Most of the market sells one of three things: generic strategy advice, AI tool demos, or agency coaching that stops at mindset. None of them install anything.

vs. Marketing Strategy Consultants

They give you slides and frameworks. We give you systems, workflows, automations, and agent roles that run inside your business after the sprint ends.

WE BUILD. THEY ADVISE.

vs. AI Consultants

Most AI consulting sells novelty and tooling demos. We tie every automation and agent to business throughput and operator relief. No theater.

LEVERAGE, NOT NOVELTY.

vs. Agency Coaching

Coaching usually stops at positioning, mindset, and sales tactics. We go deeper: execution design, daily reps, machine builds, and an AI council with real jobs.

EXECUTION, NOT PEP TALKS.

> We don't sell information. We sell installed operating leverage inside a business that already has motion.

COMMON QUESTIONS

Straight *answers.*

“I can figure this out myself.”

> You probably can. The question is whether you will, given everything else on your plate. DIY is slow when you're already overloaded. The sprint compresses months of figuring-it-out into four weeks of doing-it.

“I already use AI tools.”

> Using ChatGPT is not the same as having operational leverage. Tools without structure create noise. We install agents with defined jobs, scopes, and handoff protocols that actually reduce your workload.

“I need more leads, not systems.”

> More leads into a broken machine creates more pain, not more profit. If every new client makes the business harder to run, the operating system is the bottleneck — not the pipeline.

“This sounds like consulting wrapped in new language.”

> Consulting delivers recommendations. This delivers installed systems. You walk away with a sharper offer, a daily rhythm, a working automation, and an AI council — not a slide deck.

“How do I know this will actually reduce my workload?”

> Because every deliverable is designed around one metric: less founder dependency. If the business still routes through your hands after the sprint, we failed. That's the bar.

“Why $3,500?”

> Because the ROI is immediate. One reclaimed client you forgot to follow up with pays for the sprint. One automation that saves five hours a week pays for itself in a month. The price is low relative to what founder overload actually costs.

NEXT STEP

Ready to build the *machine?*

Four weeks. $3,500 flat. One leverage stack installed inside your actual business.
